 **Jagram**

Jagram is a unique company, difficult to compare with any other.

For example, we believe that success in business can be combined with family life and the pursuit of passions. We also believe that this can be achieved through a work ethic that benefits everyone, be it customers, business partners or employees (not forgetting of course ingenuity, intelligence and hard work). We recognize that this requires constantly learning and respect for the natural and social environment.

In practice, we honestly strive to supply our customers with best products at best conditions, for employees our attitude means no long working hours, and the chance to enjoy free weekends, while for suppliers it means they are paid on time. The company also fulfills all its obligations, pays its taxes, earmarks a significant budget for further training of its team members, and maintains good, long-term relations with business partners.

It also means that the company renounces the now widespread use and importing of goods, materials and raw materials that are harmful to the environment and people, despite the potential profitability of such activities.

We are garden wood specialists with 30 years of professional experience; we love working in wood and creating beautiful, functional and durable products. We are proud to have earned ISO, FSC, and ITB certificates and supply our customers with products of the highest quality.

# ECO CURVES

In the last 25 years we have tested most of the world's leading glue, machinery and tool brands, adding our own patented solutions to create a technologically unique production process - our factory computers and machines will turn timber laths into laminated curves of the most elaborate shapes in just 40 minutes. If you are looking for a bespoke product - we are the best choice there is.

# LEISURE COLLECTION

To create our loungers collection we invited the best designers and timber engineers to focus on ergonomics as well as the visual effect. As a result it combines luxury and comfort to enhance any standard décor, lending it an exclusive, unique appearance. They are also featuring quality, weatherproof, European made, shape adjusted cushions.

# WHY Growing Your Own makes sense

Photo: Markus Spiske

More and more people dream about products from their own vegetable garden.

This makes for healthy and organic food. It is also part of a new trend that involves avoiding wasting food. It is much easier to simply pick as much as you intend to eat, than to predict how much you will need when shopping for the same. Also it means we can be sure that these home-grown fruits and vegetables have not been treated with agents harmful to people and nature. The very short distance from the vegetable garden to the kitchen ensures that everything is fresh, and there's no need for transport.

Vegetables and fruit can be grown on a balcony or in the garden. In both cases, wooden planters and flower pots will be useful. Special crates can also be used in the garden to create raised beds.

Such vegetable patches make cultivation easier (in the case of the tallest ones, with a height of about 80 cm, there's no need to bend down), the soil in them is aerated, and each can be filled with a different type of soil, making

Photo: Daiga Eliaby

Photo: Alias Morr

us independent of the type of soil in the garden. Thanks to such organization of one's crops, it is easier to maintain order in a small garden, the whole arrangement looks very pleasing to the eye, and one can also clearly separate different crops and this, for example, makes it more difficult for pests. It also deters dogs from getting in between plants. The yields from such planting are clearly much greater.

What will you make from your own vegetable patches? If you plant basil, you can, for example, make delicious pesto, or with tomatoes and egg plant – a delicious letcho. You can eat cucumbers fresh or you can preserve them in various ways. You can dry tomatoes (homemade dried tomatoes are delicious), prepare purees for the winter or bake and store them frozen.

# HOW A GARDEN

## can improve one's mood

For all those ills affecting both the body and soul there's a simple remedy we can propose with a clean conscience – a garden.

---

The very sight of greenery has a soothing effect on us, relieves stress and allows us to forget our everyday troubles. A restful moment surrounded by plants will perk us up after a stressful day at work.

On a very sunny or a rainy day, an ideal place to relax will be an arbour, which will provide us with shelter and at the same time allow us to observe nature. It's important to have the right kind of furniture on which to lie comfortably. This can be a couch or an armchair with soft cushions. Another form of rest is provided by a hammock, whose rocking motion has a beneficial effect on shattered nerves.

Gardening is also one of the healthiest types of exercise. We perform this outdoors, it is a very versatile and much more sensible activity than running on a treadmill. And the wonderful results of our efforts are beautiful flowers or delicious products from our own vegetable patch.

# WOODEN garden trellises

A wooden trellis is the ideal surface for plants to climb on and it makes a perfect partition if we want to create an intimate space.

Such trellises were first used as supports for climbing plants. A wooden trellis is the ideal surface for plants to climb on, however, we are more and more often discovering that they also have many other advantages. We set them up in our gardens, or on terraces and balconies, to isolate ourselves from neighbours, block an unsightly view or to create an intimate space in which we won't be observed. We can then arrange plants to climb them, but sometimes a wooden openwork partition is simply enough to make us feel more at home.

Trellises of various densities may be useful for different purposes. For climbing plants, grilles with larger openings are more convenient, but if the trellis is to act as a partition, it should be denser. There are traditional trellises with square sections set at different angles, as well as more modern ones, with dense sections between narrow openings in the shape of long rectangles.

A well-chosen trellis will not only provide an effective support for vines or act as a partition, but will also function as a truly decorative feature of the garden.

The Olimpia Arch is a classic garden arch that will become a beautiful focal point within your garden. Plants can be trained to climb the trellis side panels creating a stunning floral arch that will compliment your garden path or alternatively you can use this wooden arch to make an attractive entrance to your garden.

# WHY A CARPORT instead of a garage?

When we decide to leave the car outdoors, at the mercy of the weather, we have to count on many kinds of inconvenience.

When we decide to leave the car outdoors, at the mercy of the weather, we have to count on many kinds of inconvenience. The interior of the car heats up on sunny days and the impression we get is that of climbing into a heated oven. When we come home with the shopping on rainy days, we have to struggle with heavy packages and an umbrella. We have to clean leaves off the car in the autumn and snow in winter.

When we've finally had enough, it's time to decide what to build – a brick garage or a wooden carport. At first glance, the first of these solutions might seem more durable and better for the car. But is that really the case?

A car stored in winter in a brick-built heated garage thaws out at night, then freezes up again during

the day. Such constant freezing and thawing is fatal to a car's bodywork. A car parked beneath a carport is not exposed to such temperature fluctuations.

A carport not only protects the car from the sun, snow or leaves, but also it turns out that the windows of the car don't ice up.

No permit is needed to build a small carport, construction costs are low, the structure has a light, aesthetic appearance and is very durable. It can be built even on a narrow plot, close to the border with a neighbour. In models based on glued arches, which don't require the use of as many supports as more traditional structures, parking is easier than in the confines of a garage.
